

# Project Report

**Title of Project:**

ai study planner

**Name of the Innovator:**

srushtika vallal

**Start Date:**

5-feb-2026

**End Date:**

10-feb-2026

**Day 1: Empathise & Define****Step 1: Understanding the Need****Which problem am I trying to solve?**

helps students to organizes , schedule and prepare for examination

**Who is affected by this problem?**

student

**How did I find out about this?**

Online Research

**Step 2: Problem Statement**

Students struggle to organize and manage effective study schedules because existing methods are manual and not personalized, leading to inefficient learning and poor time management

## **Why is this problem important to solve?**

An AI study planner is important because it creates personalized, adaptive study schedules that help students manage time effectively and improve learning outcomes.

## **Take-home task insights:**

This project demonstrates that intelligent scheduling systems can reduce academic stress and help students achieve their goals more efficiently.

## **Day 2: Ideate**

### **Step 3: List at least 5 different solutions:**

1. Personalized Schedule Generator
2. Smart Progress Tracker
3. Intelligent Reminder System
4. Adaptive Prioritization
5. Interactive Learning Support

### **Step 4: My favourite solution:**

Smart Progress Tracker – Tracks study sessions and performance to adjust plans dynamically.

### **Step 5: Why am I choosing this solution?**

The Smart Progress Tracker is selected because it monitors study sessions and performance, identifies weak areas, and automatically adjusts the study plan. This helps students stay on track, improve time management, and learn more effectively.

## **Day 3: Prototype & Test**

### **Step 6: What will my solution look like?**

The AI Study Planner prototype is a smart system that creates personalized study schedules based on subjects, deadlines, and available time. It tracks progress and adjusts the plan automatically to help students improve performance and manage time effectively.

## **What AI tools will I need?**

Machine Learning algorithms (for personalization)  
Natural Language Processing (for understanding user input)  
Data Analytics (for tracking performance)  
Recommendation System (for adjusting study plans)

## **Selected AI tools:**

1. Python
2. TensorFlow / Scikit-learn
3. Firebase / MySQL
4. React / HTML-CSS
5. Gemini API Key

## **Step 7: Test - Getting Feedback**

### **Who did I share my solution with?**

5–10 students from different courses, Project development team members

### **What works well:**

Generates personalized study schedules  
Easy to enter subjects and deadlines  
Smart progress tracking feature  
Simple and user-friendly interface

### **What needs improvement:**

Better accuracy in time estimation  
More customization options  
Add reminders/notifications  
Improve UI design and speed

## **Day 4: Showcase**

### **Step 8: Final Project Title:**

**1-Minute Pitch Summary:**

**Step 9: Reflections**

**What did I enjoy the most?**

**What was my biggest challenge?**
